(a) CHILL+
fraction with the correct polytype
depth below the outermost molecules (Å)
seed, N = 50
seed, N = 100
seed, N = 200
seed, N = 400
seed, N = 800
seed, N = 1600
planar interface
(b) PTM
fraction with the correct polytype
depth below the outermost molecules (Å)
(c) Forward: undercounting
correctly labeled / constructed molecules
equimolar seed radius R (Å)
CHILL+, mean
CHILL+: f(1 − δ/R)³, δ = 3.6 Å
PTM, mean
PTM: f(1 − δ/R)³, δ = 5.5 Å
(d) Inverse: recovered size
size recovered from the labeled count
constructed nucleus size N
CHILL+, from largest cluster
PTM, from largest cluster
